The Defender Fence

Electronically Monitor Your Perimeter

The Defender Fence by AMAROK establishes a low-voltage electronically monitored perimeter all around your property, alerting you of activity and sending would-be criminals running. It's another perimeter security option for lower-crime areas or where permitting is restricted.

The Defender Fence stands 10 feet tall with 20 strands of wire and includes fiberglass support poles every 30 feet. Visible warning signs indicate the entire perimeter is electronically monitored.

The fence wires are charged with 50 volts of electricity from a solar-powered energizer. A change in voltage, from either cutting or touching the wires, triggers sirens and lights, and a notification is sent informing you of an attempted break in.

The Defender Fence Benefits

Sentinel is included—and its extra sirens and flashing lights attached to the solar-powered control panel activate during an attempted perimeter breach.

Convert to The Electric Guard Dog™ Fence and its solar-powered 7,000 volts at any time.
