# Security Enhancements

## The Electric Guard Dog™ Fence does more for your peace of mind with Security Enhancements from AMAROK®.

Do you experience daytime theft and tampering or struggle to maintain security during business hours? For some properties, studies show that daytime theft can occur at five times the rate that it occurs at night. In these cases, criminals would rather blend in with the crowd and steal what they can rather than risk the hazards of an actual break-in.

Or maybe you've been a victim of thieves digging under or tossing goods over your fence, and you need solutions to further enhance security in these areas.

If you have specialized security needs, you may benefit from AMAROK Security Enhancements.

Don't be a soft target. Enhance your security today.

## DAY MODE

### Enables 24-hour security, even during business hours.

The fence pulses at 1,000 volts during business hours to monitor your perimeter 24/7 and prevent tampering. After business hours, up the voltage to a stunning 7,000.

Works with multiple zones

Manually operated by a key switch or automatically engaged with the opening and disarming of a gate zone.

## GATE AUTO ARMING

### Simplifies traffic and limits the need for access codes.

Equip your gate with AMAROK's Gate Auto-Arming enhancement, and keep the voltage pulsing through the perimeter, even when the gate is open. When the gate is closed, it auto-arms, which allows the last individual to leave without entering a code.

Works with roll, swing, manual, or automatic gates

Disarming still requires a code for security

## LAYDOWN FENCING

### Deters digging.

If you've experienced theft by digging under your perimeter fence, our Lay Down Fencing enhancement for The Electric Guard Dog™ is the solution. This angled extension of the lower portion of the fence greatly increases the distance between a would-be thief and access to your property, eliminating theft by digging.

4" spacing of fence wires

Requires perimeter is well-maintained and cleared of vegetation

## ANGLED FENCING

### Prevents theft-by-tossing.

Some thieves will enter your site as a customer and toss goods over the fence without paying, picking them up on their way out. With Angled Fencing, the top two feet of The Electric Guard Dog Fence are installed at a 45-degree, inward angle.

Increases protected area at the top of The Electric Guard Dog Fence

Tossing tools and stolen goods over the fence is far more difficult

## GROUND WIRE MONITORING

### Detects Tampering at Ground Level.

Ground Wire Monitoring senses when a ground wire is tampered with. The system must be armed and pulsing with electricity to detect tampering.

Eliminates needs for ground loops

Ground Wire Monitoring comes standard with The Electric Guard Dog 30 Series
