Security Bollards

What *is* a bollard and why does AMAROK offer them?

A bollard is a steel post that adds physical strength to your perimeter. They can protect your building, equipment, and fence from accidental damage. And when placed strategically, they can also help deter theft.

Steel bollards from AMAROK are 4.5" in diameter, filled end-to-end with concrete, and painted bright yellow. Our bollards extend approximately 4' above ground with about 4' buried below ground. They aren't going anywhere, and neither are your valued resources, equipment, and assets.

Use Bollards to protect your property and assets from damage and theft:

Protect buildings or fixed outdoor equipment in parking areas from accidental vehicle bumps

Block or direct traffic on certain areas of your property

Prevent ram-raids through your fence or buildings with bollards along road frontage

Prevent quick loading of vehicles with stolen goods by using bollards near bays and back doors
